

When it gets **hot** in
your digital transformation
challenge

Organizational Heat Map

Understanding the formal and
informal sides of your organization

Identifying **hot spots** between
current and future structures

Shaping and realizing your
sustainable transformation plan
by turning hot spots into
sweet spots

Why digital transformation processes usually fail because of the organization – and what can be done about it

Digital technologies influence structures and processes in an organization.

In other words: Digitization frequently changes the formal structures of organizations and also encounters informality.

This might lead to resistance and informal reactions which are often times underestimated during planning and implementation.

In order to make transformation projects successful, it is necessary to take all three sides of the organization into account:

The display side

It encompasses the self-presentation of organizations and their actors – both internally and externally.

e. g. the corporate website or the presentations and appearances of executives

The formal side

It contains the rules, processes and specifications that (can) be formally decided.

e. g. communication channels, process descriptions, strategy papers, etc.

The informal side

It describes the organizational culture, i. e. the lived practice that deviates from the formal rules. This always arises as a reaction to the formal structure.

e. g. short informal channels, secret leaders, and beaten process paths.

Why digital transformation processes usually fail because of the organization – and what can be done about it

The three sides are in mutual relations and dependencies to each other.

Changes on one side of the organization usually provoke adjustments on the other sides.

Furthermore, there is no linearity in transformation challenges.

The dynamic in complex systems ask for a holistic, iterative approach.

The display side

It encompasses the self-presentation of organizations and their actors – both internally and externally.

e. g. the corporate website or the presentations and appearances of executives

The formal side

It contains the rules, processes and specifications that (can) be formally decided.

e. g. communication channels, process descriptions, strategy papers, etc.

The informal side

It describes the organizational culture, i. e. the lived practice that deviates from the formal rules. This always arises as a reaction to the formal structure.

e. g. short informal channels, secret leaders, and beaten process paths.

Why digital transformation processes usually fail because of the organization – and what can be done about it

But: Digitization projects focus primarily on technical and formal changes – e. g. best practices like ITIL or frameworks like TOGAF have a rather technocratic base.

They consider the static formal representation of the organisation and negate the power of informality.

The organization is the blind spot in the digital transformation.

This blind spot can be closed with the »Metaplan organizational heat map«. It is at the same time an analysis and design tool in change processes.

The display side

It encompasses the self-presentation of organizations and their actors – both internally and externally.

e. g. the corporate website or the presentations and appearances of executives

The formal side

It contains the rules, processes and specifications that (can) be formally decided.

e. g. communication channels, process descriptions, strategy papers, etc.

The informal side*

It describes the organizational culture, i. e. the lived practice that deviates from the formal rules. This always arises as a reaction to the formal structure.

e. g. short informal channels, secret leaders, and beaten process paths.

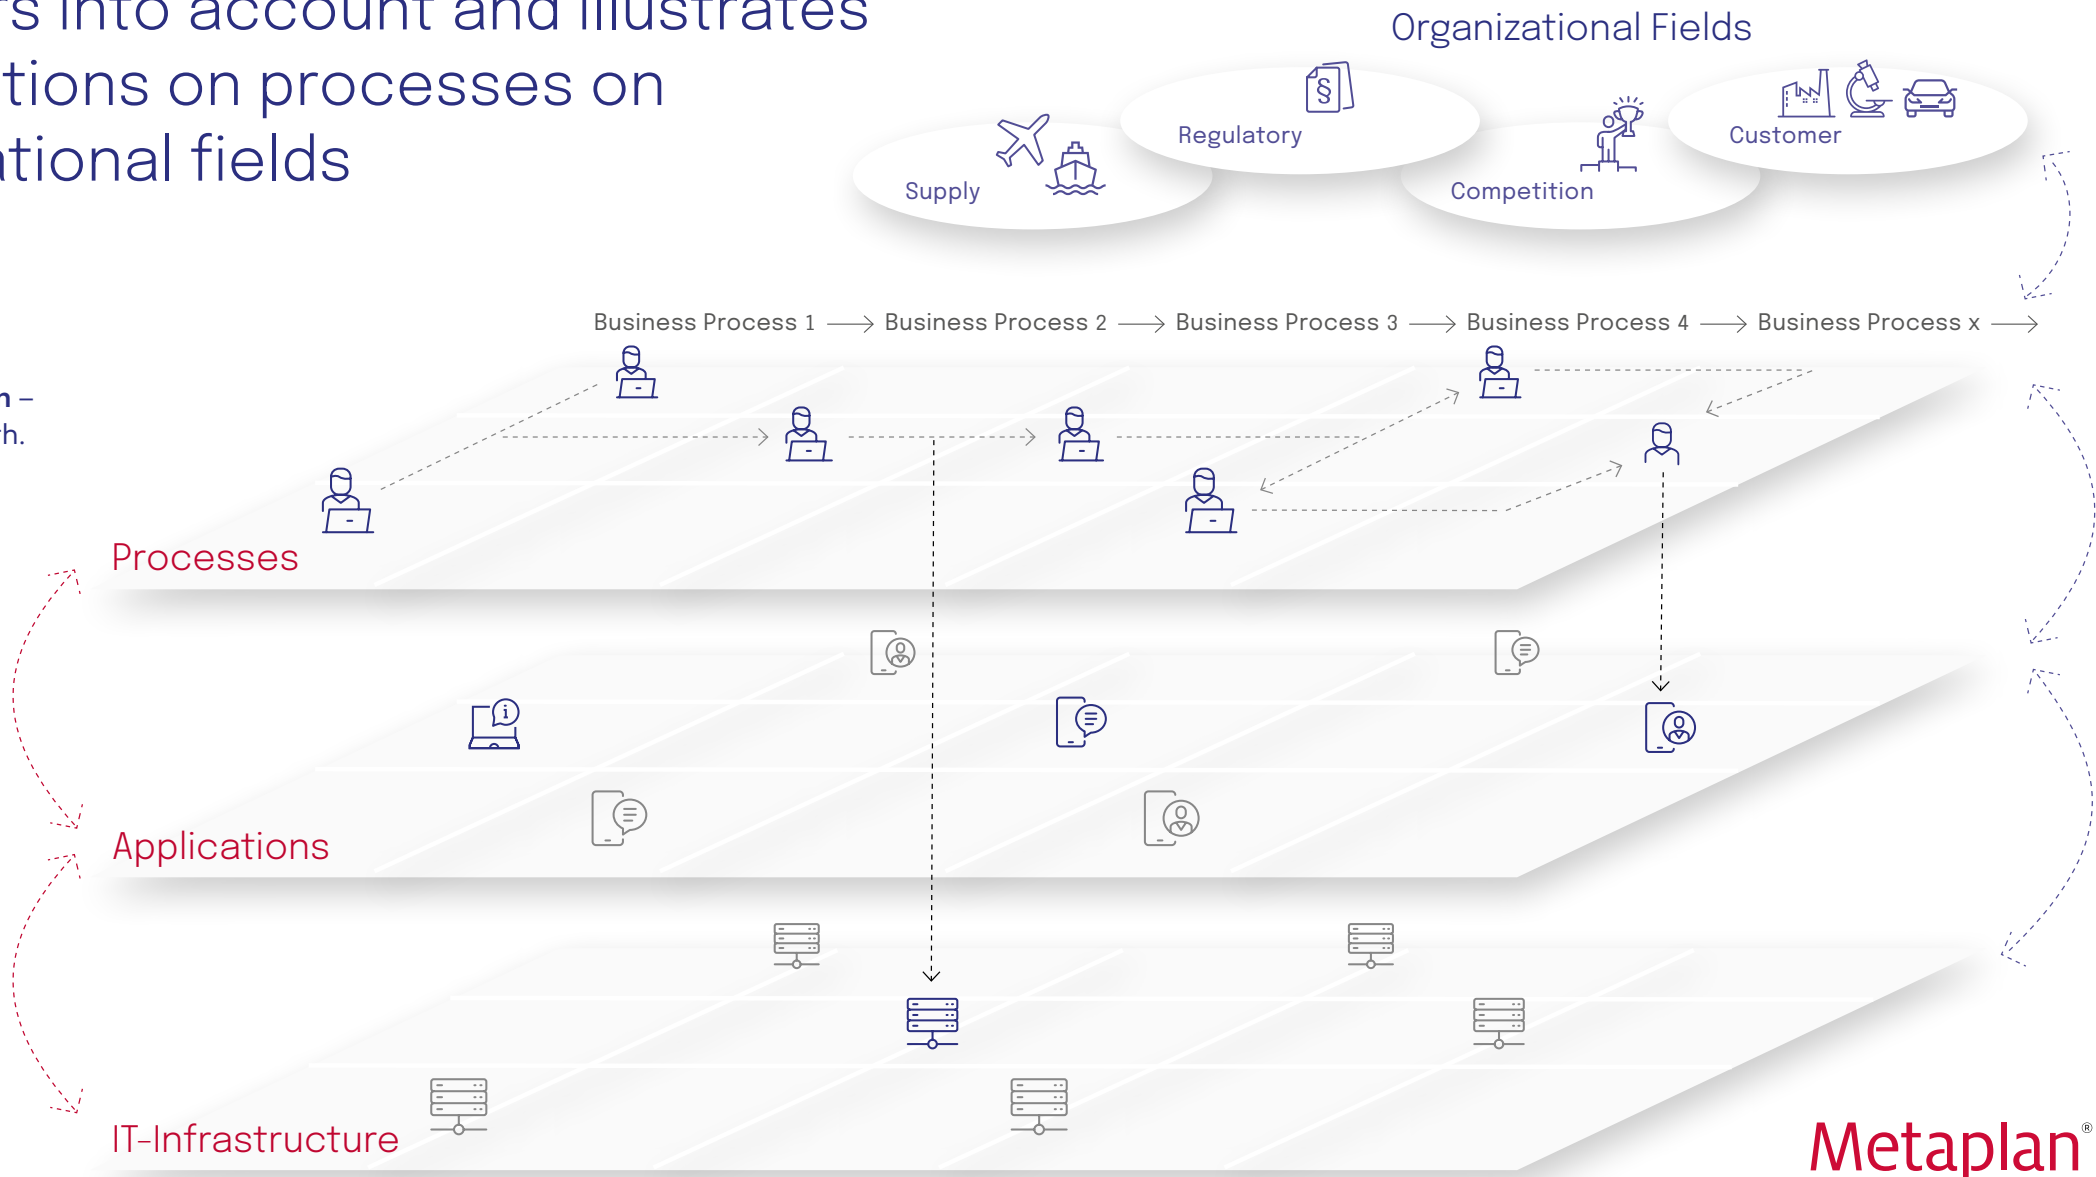

*where the magic happens

Metaplan®

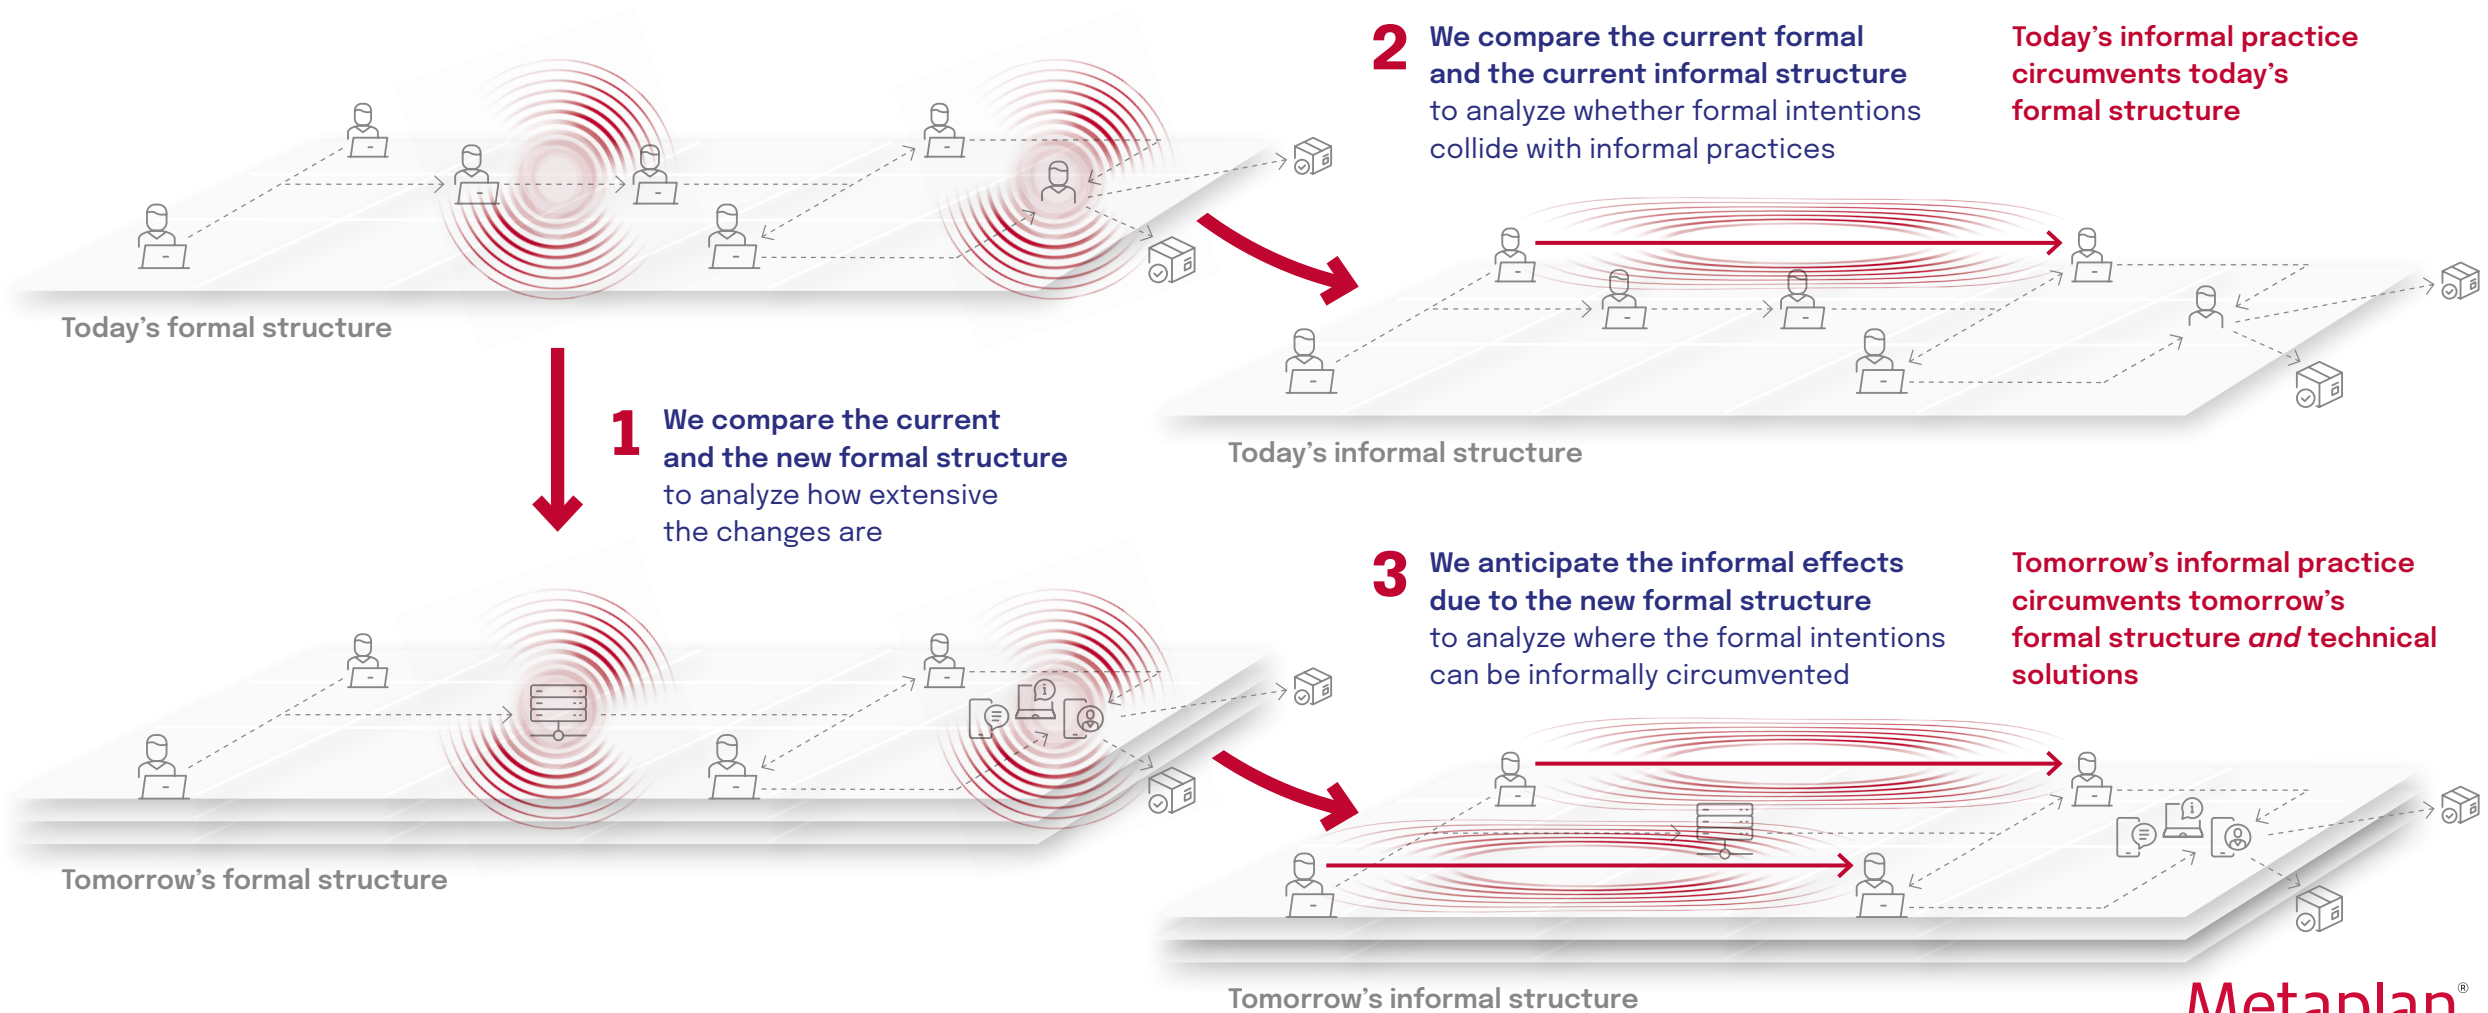

The organizational heat map takes the IT-layers into account and illustrates the implications on processes on all organizational fields

IT experts often times only look at the formal side of the organization – that is only half the truth.

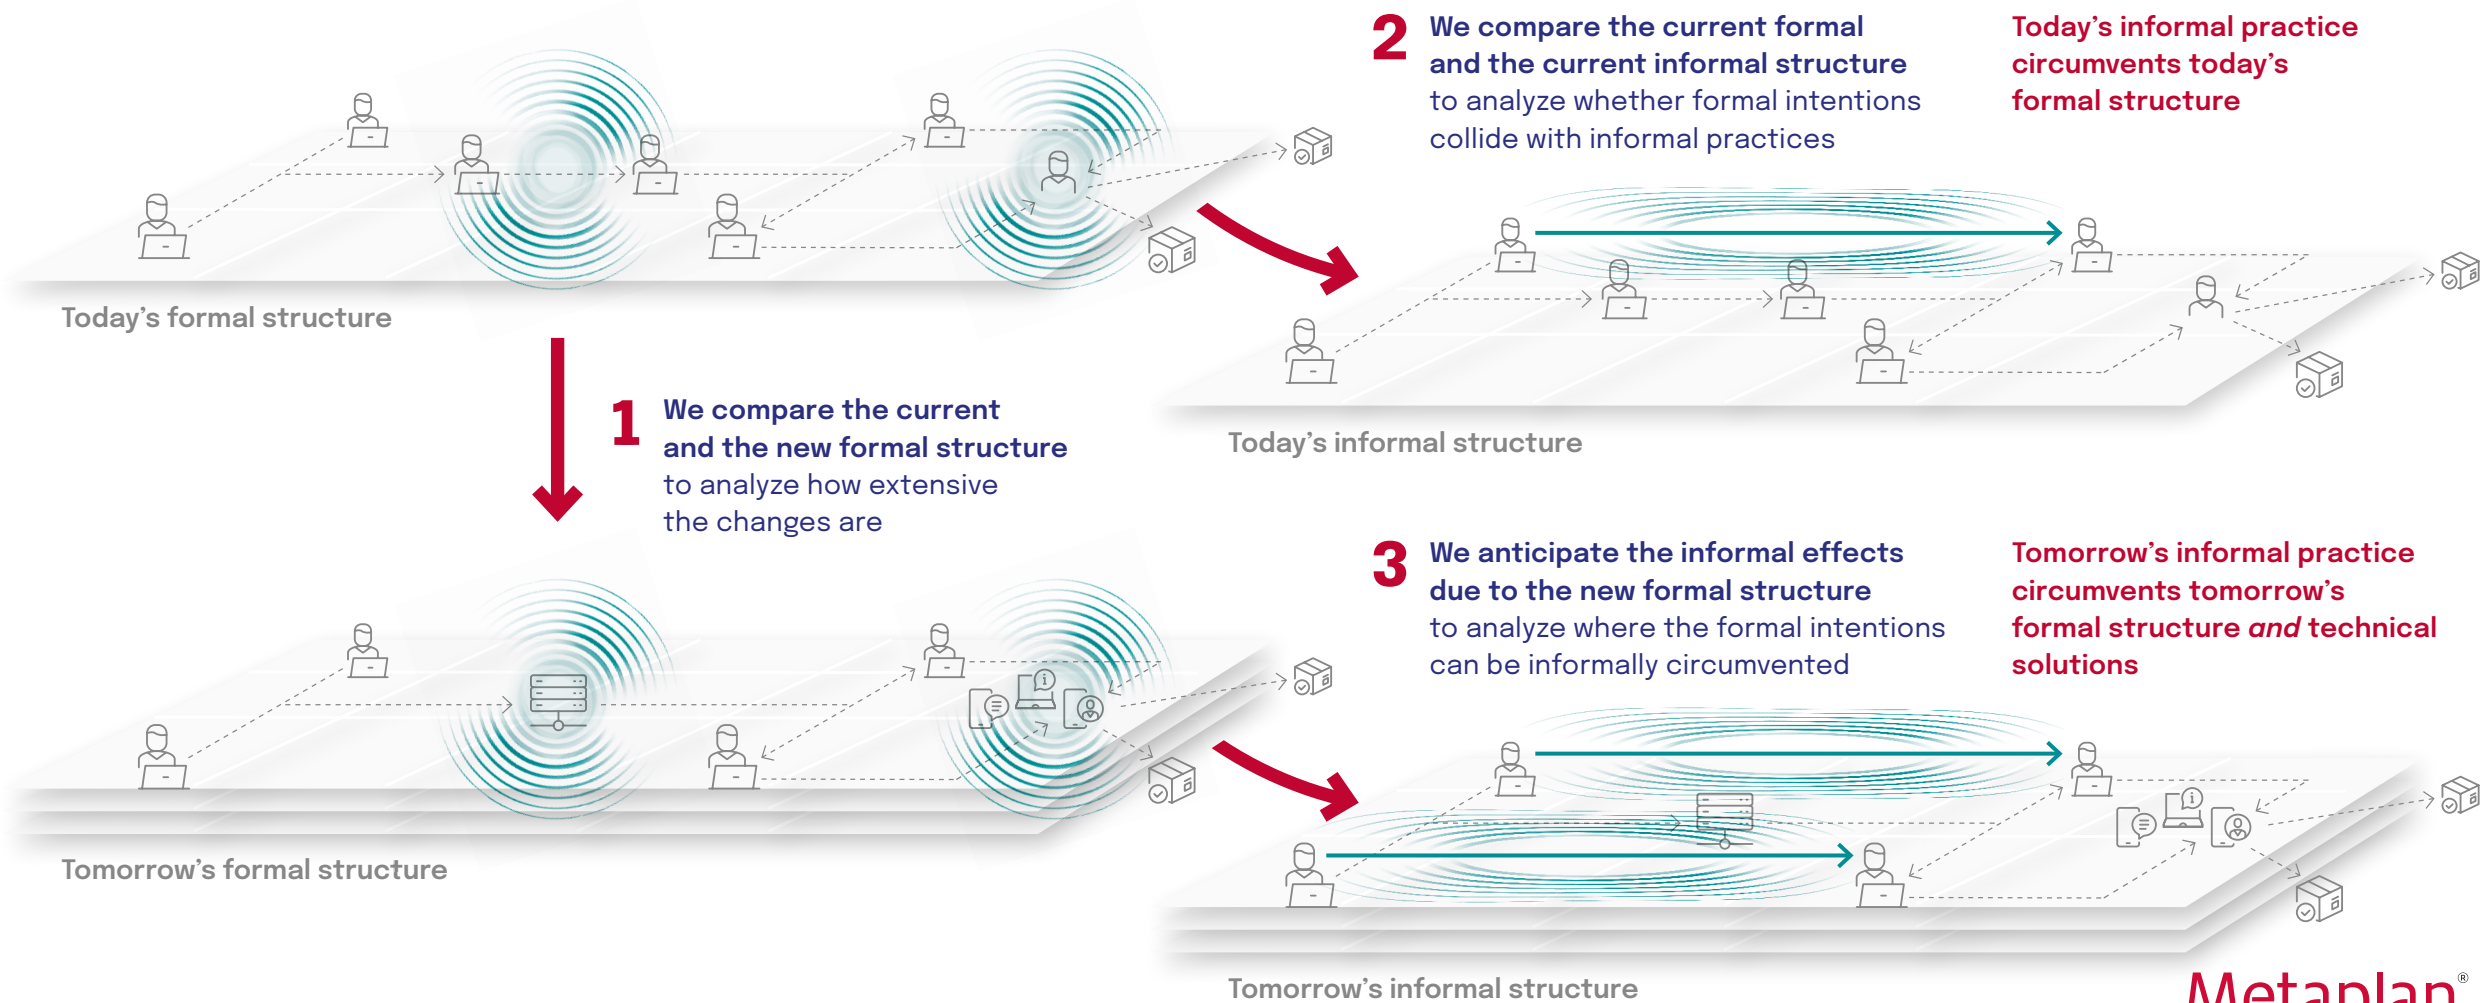

We look at all the changes that technology brings, even if they are not formally codified.

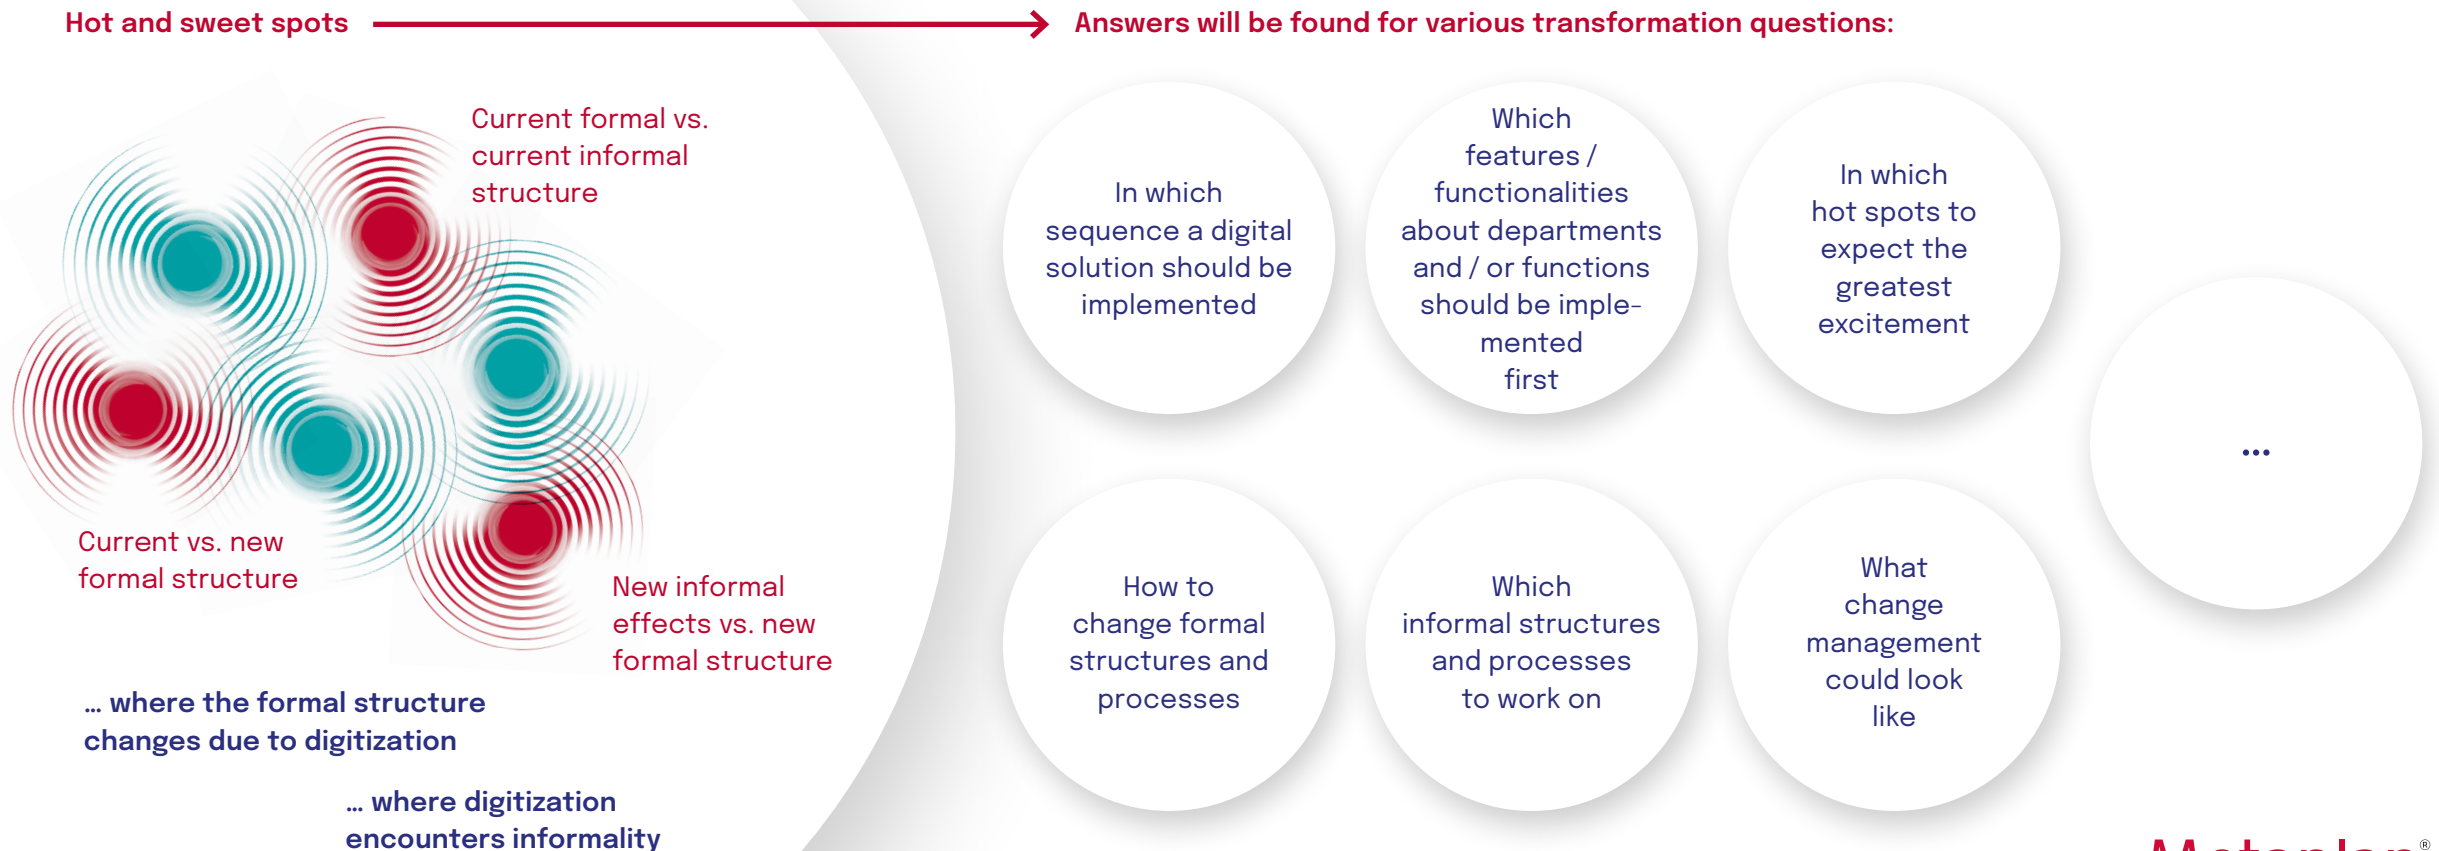

Zooming in on the organizational heat map provides the opportunity to focus on **hot spots** in three constellations:

Shaping and realizing your sustainable transformation plan by turning hot spots into sweet spots:

Both hot spots and sweet spots mark neuralgic points in the digital transformation project that can be used to work effectively on the structures supporting your challenge

Hotspots mark neuralgic points in the digital transformation project and can be used to work effectively on the structures supporting your challenge

Hot Spots

Answers will be found for various transformation questions:

... where the formal structure changes due to digitization

... where digitization encounters informality

In which sequence a digital solution should be implemented

Which features / functionalities about departments and / or functions should be implemented first

In which hot spots to expect the greatest excitement

...

How to change formal structures and processes

Which informal structures and processes to work on

What change management could look like

Who we are – and what makes us tick

We are a science-based organization and strategy consultancy – with more than 50 consultants in nine countries worldwide.

We combine experience in teaching and research in organizational sociology with decades of consulting practice in a variety of industries.

Together with you, we find out what opportunities and challenges your digital transformation brings and how you can make your projects succeed – remotely, hybrid or in presence.

This is how we approach it together with you

Our support must fit your challenge: You decide when, how intensively and at which phases we may support you.

We look forward to working with you
