**5.00 – 6.30 pm Berlin /
11:00 am – 12:30 pm New York**

In times of increasing pressure in the life science industry, there is an organizational trend leaning towards the adaption of *models of convergence*.

Companies tend to integrate responsibilities on a functional or portfolio level or for customer facing functions. End-to-end responsibilities are implemented to steer resources.

We want to explore the up- and downsides of the organizational dynamics behind models of convergence.

What insights will we discuss?

➤ A comprehensive understanding of the organizational dynamics following the re-organization of ways of working

➤ Individual experiences from keynote speakers on what organizational changes have been successful in the recent past

➤ We will reveal patterns from selected examples and de-generalize how organizations have adapted to changes in the ecosystem

What makes it special?

➤ A comprehensive 1.5h peer learning event addressing one of the biggest challenges companies in the life science industry currently face

➤ Deep dives into specific examples that create relevance for your own practice

➤ A strong focus on implementation of organizational concepts

➤ The opportunity to engage in discourse with peers who are facing similar challenges
